## Banners

- Vinyl printing
- Wide Banner
- Blockout Banner
- Fluorescent Banner
- Mesh Banner
- Solit Banner
- Gloss Banner
- Double sided Banner
- Matte Banner
- wallpaper
- Clear vinyl
- Canvas

**Banner printing** can be the most important media in the outdoor advertising group, which is used for a variety of advertising, in particular, the introduction of companies, products, and services. Banner is using as the most important printing media and outdoor advertising, for any graphical implementation in the environment with the function of informing and advertising such as billboards, urban printed leaflets, store signage, etc. In the banner printing, because the work surface is exposed to outside air, printing media and ink resistance are very important against the wind, water, humidity, sunlight and other environmental factors. **Printing Advertising** banners is one of the best tools for advertising activities of the companies and introducing their products in which different types of banners depend on the tastes and occupations of the individuals.

The feature of the wide banner is its width, which covers the widths above 320 to 500 cm seamlessly, and so cases with dimensions of up to 5-meters can be printed at once and provided within a single page. This feature boosts printing speed significantly for banners wider than 320. Based on the dimensions of the work, there is the possibility of ordering the desired size (in the transverse dimensions as mentioned). The 5-meter width service is rare and limited due to the high cost of its specialized printing machines, which is offered in different qualities of clarity and color in this printing centre.

**Wide Banner**

Vinyl printing or sticker printing is a thin PVC material which is glued behind it, It is water-proof and washable and has a high resistance to tearing. The material of the vinyl or sticker, due to the form of the label and the convenient installation on different surfaces, especially glass, is nowadays widely used in various application of advertising industry. Sticker printing is widely used in different sizes, designs and colors in an interior as well as exterior spaces surfaces. The sticker is divided into several types of temporary adhesive, cutting plotter, gloss, permanent adhesive, matt glassy and matt milky.

**Vinyl Rolled**

The blackout banner is a specially designed banner. In some cases, material needs to not pass through the light after printing, such as when the banner is on a grid that is behind the sunshine and we do not want to see the shadow of the item or back structure on the design. Blackout banner is a banner that has blackened its back surface and prevents light transmission and shading, so the image on the banner has a great effect.

**Blockout Banner**

Solit banner is mostly used for small distances to the audience and in general, this banner is used for viewing locations from a close distance, such as background images of seminars, news meetings, stands, exhibition boards, strategic boards, etc. in indoor and outdoor spaces. Because of the smooth surface, these banners have the ability to print high-resolution images and excellent quality design and color. The main features of the solit banner, in addition to high-quality, are high-speed production and preparation for instant occasions (such as printing on the exhibition booths).

**Solit Banner**

Double-sided banner can be printed on both sides (back and forth) and one of the most important uses of this type of banner is lamp post banner that the description is mentioned in the technical specifications.

The use of double-sided banner is advertising the display and showcase of stores, as well as any advertising that is hanging and suspended in the space (In this case, both sides of the banner are fully seen). Another application of double-sided banner is in advertising that one side is used to partition the space.

### Double sided Banner

Fluorescent banner is also popular as the reflective banner on the market. This type of banner with light absorption and reflection features in dark environments has a wide range of functions in non-light spaces that do not have enough brightness to view the banner surface and the banner surface is lit only with the cars' lights. The most important applications of these banners are road sign boards, road signs on dark passages and vehicle surfaces, especially in the mines.

### Fluorescent Banner

### Mesh Banner

Mesh banner is another kind of polyester banner, which is a grid with small holes with the English name (One Way Vision Film), which allows the light to pass through the banner and see the space behind the banner. Non-adhesive mesh is used for applications such as exterior decor. It is also used to partition different spaces due to its light passivity. This type of banner is used for advertising with a fairly large distance from the audience and in windy regions such as the seashore. It is a decorative material that your corporate designs and logos can be printed on it perfectly.

### Clear vinyl

Clear vinyl or glass label is type of resistant labels that are clear and colorless and the surface can be seen from both sides after printing.

The greatest application of transparent label in the digital printing of the interior is to paste designs and print signs on different surfaces, especially glass surfaces and it is used in advertising of exhibition spaces and stores, in the automotive, glass and window industries as well.

### Wallpaper Banner

In digital printing, the printing of wallpaper is accepted on the basis of the customer's request, the color, and the desired size, and printed on the raw material of the wallpaper. Designs, based on the location of the installation (home, work, etc.), can be very diverse and include a different spectrum from the natural landscapes to the portrait of a person. The wallpaper must be washable and stable against the light.

Canvas is a special material of painting (a fabric that is put on a canvas) with irregular and scattered texture, and the printing of a picture and image on it is very beautiful, impressive and lasting. Canvas printing in digital printing of interiors is used for displaying exquisite artistic panels in studios and galleries, printing of pictures, interior decoration of houses, hotels and offices, printing of curtains and, in general, displaying designs in large format in the best print quality and image display.

### Canvas

The main feature of the matt banner is the lack of reflection of light and that's why it has extensive application in outdoor spaces and environmental advertising, exhibitions, stadiums, as well as indoor spaces which are exposed to direct sun. The durability and long life in the outer space and the color stability against the sun, are other features of this type of banner.

### Matte Banner

Gloss paper is paper with a gelatin coating that has a greater brilliance and better quality than ordinary paper. In digital gloss printing, the use of gloss paper is for work that needs to be high in image quality and color clarity. The quality of printing and nary paper and photo gloss paper, which is used for professional printing of photo printing and graphic designs.

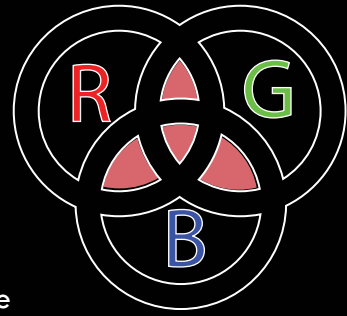

### Gloss Rolled

## Office Suite

Business Card  
Catalog Printing  
Brochure Printing  
Flyer Printing  
Poster Printing  
Tag Printing

**Office suite** is a collection of administrative papers that often include a letterhead, envelope, and a business card that is used for office and correspondence with offices, companies, corporates, etc., based on a specific graphical design. The office suite creates a kind of independent visual identity for each set due to its benefit of a particular graphic design. Digital printing is the best method for fast printing and low-volume printing with desirable design and quality.

## Laser Cutting & Laser Engraving Sign & Channels letters

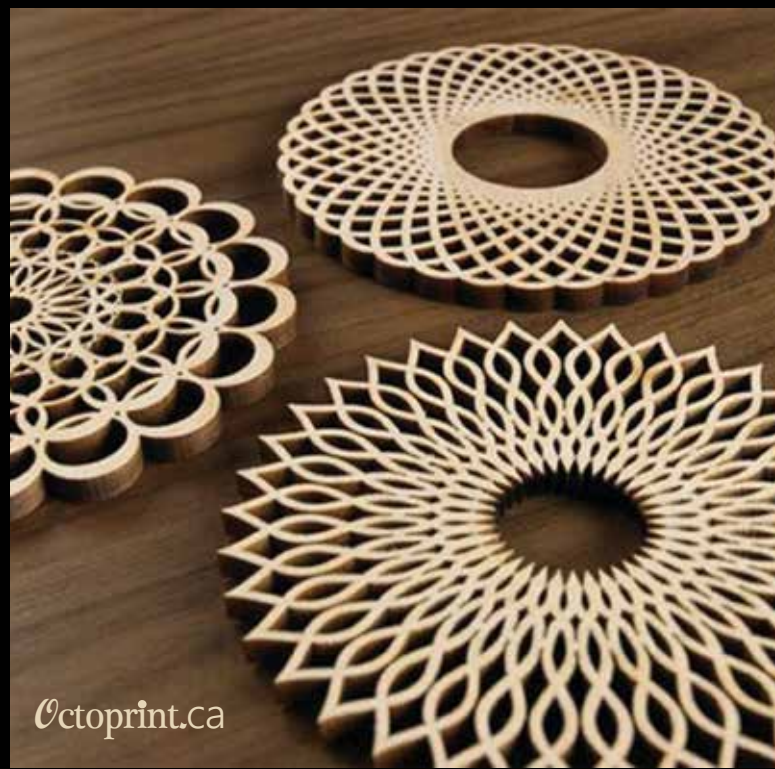

**Laser cutting** is referred to the cutting technology of items and parts by the laser which is widely used in various fields of industry, including the field of advertising and decoration. Laser cutting is performed by placing a powerful laser beam on the cutting sections.

**Laser engraving** is one of the newest engraving techniques that has revolutionized the field of advertising and printing by utilizing modern machines. They are used in making replicas and puzzles, decoration in the field of promotional gifts, seals, light boards, postcards and fancy wedding cards with wood and plexiglass materials, and other products.
